Experiment 6

Aim: To Set Up Firebase with Flutter for iOS and Android Apps

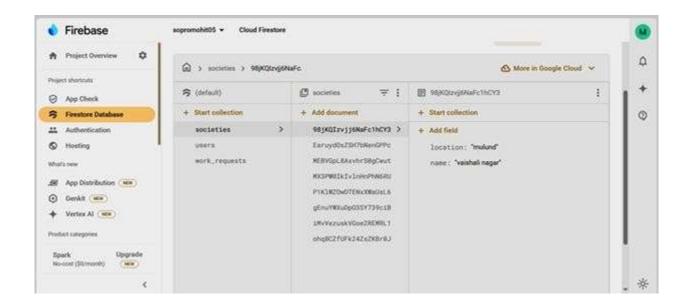

Theory:

In this experiment, we connected a Flutter app to Firebase to use cloud-based features like authentication, database, and analytics. It involved setting up Firebase SDKs, adding configuration files, and initializing Firebase in the app.

Output:

Conclusion:

This experiment provided hands-on experience in integrating Firebase with a Flutter app for both Android and iOS. It enables the use of powerful backend features like authentication, Firestore, and real-time updates, which are essential for modern app development.
